Dear Patient XX:

We are reaching out to share some exciting news from Practice XYZ. We are now offering Evoke™ Smart Spinal Cord Stimulation Therapy, a new option for patients living with chronic back or leg pain.

Spinal cord stimulation has been used for more than 55 years to help people manage chronic pain.¹ It works by sending gentle electrical pulses to your spinal cord to interrupt pain signals before they reach your brain. However, not all spinal cord stimulators work the same way. The Evoke™ SmartSCS™ System represents a new generation of spinal cord stimulation therapy. It is the only system that listens to your body and automatically adjusts more than 4 million times per day to deliver pain relief starting from day one.² Even patients who have tried SCS in the past without success, or lost long term pain relief, may find relief with the Evoke SmartSCS System.

The Evoke SmartSCS System may be right for you if:

- Your pain is constant and has lasted more than six months.
- You experience chronic, nerve-related pain.
- You haven't found relief with other treatments such as pain medications, injections, traditional spinal cord stimulators, or back surgeries like fusion or laminectomy.

At Practice XYZ, we believe this represents an innovative advancement in chronic pain management, with the potential to dramatically improve quality of life for people living with chronic pain.

If you are interested in learning more about this therapy, including its risks and benefits, please contact us at XXXX (practice to fill in best method of contact).

To learn more about the Evoke SmartSCS System, visit our website at XXX (web page to add information about Evoke — see templated website text provided).

² The Evoke® System takes measurements and automatically adjusts stimulation at *each stimulation pulse delivered*. On average, the Evoke® System's SmartLoop™ therapy makes more than 4 million measurements and adjustments per day, depending on each patient's unique needs. Calculation based on a 50 Hz average frequency.
